

## **BUG-001 — Broken Images Displayed on Broken Images Page**

**Defect ID:** BUG-001

**Title:** Broken images displayed on the Broken Images page

**Severity:** Medium

**Priority:** Medium

**Status:** Open

**Environment:** Windows 11 / Chromium / Playwright

**Application:** The Internet

**Page:** Broken Images

### **Description**

The Broken Images page contains images that fail to load correctly. When the page is inspected using Playwright, one or more images are identified with a `naturalWidth` of 0, indicating that the image resource did not load successfully.

The automated test detects and reports the presence of broken images rather than failing the test solely because broken images exist. This allows the test to act as a defect-detection mechanism while keeping the test result meaningful.

### **Steps to Reproduce**

1. Navigate to the Broken Images page.
2. Inspect all images displayed on the page.
3. Check the `naturalWidth` property of each image.
4. Identify images where `naturalWidth === 0`.

### **Expected Result**

All images displayed on the page should load successfully and contain valid image resources.

### **Actual Result**

One or more images fail to load and are identified as broken (`naturalWidth === 0`).

### **Evidence**

The Playwright automation test successfully identifies broken images on the page.

**Test Case:** TC-010 — Verify broken images can be identified

**Test Result:** Passed — the automation successfully detected the broken image condition.

## **Impact**

Users may see missing or incorrectly displayed images when accessing pages containing affected image resources. This can negatively affect the visual presentation and user experience.

## **Technical Notes**

The test intentionally does not assert:

```
expect(brokenImages).toBe(0);
```

because the purpose of the page is to demonstrate broken images. Instead, the automation identifies images with a `naturalWidth` of 0 and records the finding as a defect.

## **Recommendation**

Investigate the affected image resources and ensure that all referenced image files are available and load successfully.
